Yidnekachew Kassahun

AI-POWERED QA AUTOMATION ENGINEER | QA TEAM LEAD

Yidnekachew.kassahun.qa@gmail.com | GitHub | LinkedIn | Portfolio | +251913124882 | Addis Ababa, Ethiopia

SUMMARY

AI-Powered QA Automation Engineer and QA Team Lead with 3+ years in software quality, leading a 17-person QA team on large-scale testing for banking and fintech products. Experienced in manual and automated testing of banking, payments and education products on web, Android and iOS, using Playwright and Postman, within Agile and Scrum teams. Uses Claude Code to build and maintain test automation and QA tools, including the team's QA dashboard, and created a test case template the whole team uses. Currently adding Rest Assured to extend API automation.

SKILLS

AI-Powered Testing: Claude Code, AI-Assisted Test Automation, GitHub Copilot
Test Automation: Playwright, JavaScript, TypeScript, Page Object Model, Cucumber (BDD)
API Testing: Postman, REST APIs
Testing Expertise: Manual, Functional, Regression, Smoke, End-to-End, Cross-Browser, Mobile (Android and iOS)
Test and Defect Management: Jira, Azure DevOps, TestLink, Google Sheets, Trello
Version Control and CI/CD: Git, GitHub, GitHub Actions
Leadership and Process: Test Planning and Strategy, Test Case Reviews, Mentoring, QA Reporting, Agile/Scrum
Tools: Chrome DevTools, HTML/CSS, React
Currently Learning: Rest Assured for API Automation

WORK EXPERIENCE

EAGLELION SYSTEM TECHNOLOGY — *On-Site,* Addis Ababa, Ethiopia
Software Quality Assurance Team Lead — Jun 2025 – Present

- Led a 17-person QA team on large-scale regression testing for an enterprise banking super app across mobile, web and backend services.
- Built an internal QA dashboard with Claude Code that brings test progress, failed cases, bugs and reporting into one place.
- Used Claude Code to build and maintain the dashboard's automated tests, including Cucumber BDD suites with page objects.
- Created a test case sheet template that the whole QA team now uses, so test cases are written, executed and reported the same way.
- Designed and maintained test plans and test strategies for new features, and reviewed test plans and test cases to close coverage gaps.
- Conducted mobile testing on Android and iOS, verifying functionality, performance, and UI consistency across devices.
- Mentored and trained junior QA engineers on manual and automated testing, debugging, and defect tracking.

- Delivered weekly QA status reports to senior management on test coverage, open defects, and release readiness.

ABLAZE LABS *On-Site,* Addis Ababa, Ethiopia
Software Quality Assurance Engineer Jun 2024 – Jun 2025

- Executed manual and automated testing across web and mobile applications to validate software functionality, performance, and reliability.
- Conducted regression testing to verify software stability and prevent defect recurrence following feature updates and releases.
- Designed and executed detailed test cases from functional specifications and requirements documentation, ensuring comprehensive test coverage for new features.
- Identified, documented, and tracked defects using defect tracking systems, streamlining bug triage and accelerating issue resolution.
- Collaborated closely with developers throughout the software development lifecycle (SDLC) to troubleshoot issues, verify fixes, and improve overall product quality.
- Utilized Agile and Scrum methodologies to plan, prioritize, and deliver testing milestones on schedule, supporting sprint goals and release timelines.
- Participated in product design reviews to evaluate functional requirements, identify potential defects early, and provide QA input during the software development lifecycle.

EZRA SEMINARY *Remote,* Nairobi, Kenya
Frontend Developer and Manual Tester Sep 2023 – Sep 2024

- Developed responsive, user-friendly web interfaces for educational platforms using HTML, CSS, and JavaScript.
- Collaborated with backend developers to integrate APIs, improving application functionality, performance, and user experience.
- Designed responsive layouts ensuring cross-browser and cross-device compatibility across desktop and mobile platforms.
- Executed manual test cases to identify and document software defects, contributing to higher quality releases for educational applications.
- Debugged existing code, identifying and resolving bugs to improve system performance and application stability.
- Participated in daily standup meetings with project stakeholders to communicate progress, blockers, and priorities.
- Finalized and handed over the project remotely during my first months at Ablaze Labs (Jun to Sep 2024).

MICROVERSE *Remote,* California, United State of America
Full Stack Web Development Trainee Sep 2022 – Sep 2023

- Developed responsive web applications using HTML, CSS, and JavaScript, applying full-stack development principles.

- Collaborated with cross-functional teams to clarify project requirements, align on deliverables, and support project milestones.
- Conducted code reviews to enhance code quality, maintainability, and adherence to coding standards and best practices.
- Participated in daily standups to share progress updates, discuss blockers, and collaborate on problem-solving.
- Engaged in remote pair programming to strengthen collaborative coding practices and knowledge sharing.

EDUCATION AND TRAINING

MICROVERSE — Sep 2022 – Sep 2023
Remote Full Stack Web Development — San Francisco, California, United States

UNIVERSITY OF GONDAR — Sep 2015 – Feb 2021
Mechanical Engineering BSc. Degree — Gondar, Ethiopia

PROJECTS

BANKING SUPER APP (NDA): Leading QA for an enterprise banking super app: test strategy, large-scale regression testing, Android and iOS testing and release readiness.

QA DASHBOARD: Built with Claude Code as one place for the QA team's work: test progress from the teams' Google Sheets, failed cases, a bug tracker, QA KPIs, and PDF/Word reports (Next.js, TypeScript, Cucumber).

TEST CASE SHEET TEMPLATE: A shared template the whole QA team uses to write, execute, and report test cases consistently.

DASHEN BANK SUPER APP: Performed regression testing, end-to-end (E2E) testing, and test automation using Playwright to validate application functionality and ensure release stability for a banking application.

STAR PAY PAYMENT GATEWAY: Conducted manual testing, regression testing, and end-to-end (E2E) testing to validate transaction flows and ensure reliability for a fintech payment gateway platform.

CBE CONNECT: Performed regression testing to verify software stability and ensure consistent functionality across releases for a banking application.

EL-HADAR ENGINEERING: Engaged from project initiation, preparing test cases and executing smoke, regression, and end-to-end (E2E) testing to ensure application quality and reliability.

MED QUIZ: Engaged from project initiation, preparing test cases and executing smoke, regression, end-to-end (E2E), and API testing to ensure comprehensive quality coverage across the application.

EZRA SEMINARY: Developed the frontend and performed manual testing for an educational platform, contributing to both development and quality assurance across the project.

CERTIFICATION AND LICENSES

- HTML/CSS Module - Microverse, Issued Feb 2023
- JAVASCRIPT Module - Microverse, Issued Mar 2023
- REACT/REDUX Module - Microverse, Issued Apr 2023
- JAVASCRIPT ALGORITHMS AND DATA STRUCTURES - freeCodeCamp, Issued Aug 2023
- DATABASE Module - Microverse, Issued May 2023
- PLAYWRIGHT - Test Automation University, Issued Oct 2024
